

12th April 2021

I am pleased to present **Pokedex 1.0**

Introduction

Pokedex REST API that returns Pokemon information. Given a Pokemon name, returns standard and/or translated Pokemon description and additional information.

What is new in Version 1.0

Pokedex version 1.0 is the first version of its service life cycle. Pokedex is deployable in Docker Container. This release will facilitate by providing two REST api.

Compatible Products

This product has been tested on the following platforms and hardware products.

#Item	Hardware Product	Platform	Port
1	Window operating system and running on window docker container	8000	80
2	MongoDB database running on windows docker container	27017	27017

Upgrades

Pokedex version 1.0 is the first version of his life cycle. The upgradation from previous product to new one will be effected from next release.

New Features

Ref#	Name	Description
API 1	Basic Pokemon Information	Given a Pokemon name, returns standard Pokemon description and additional information.
		JWT Authentication is required with it's defined algorithm, payload structure and encoding formula if token is enabled from configuration.
API 2	Translated Pokemon Information	Given a Pokemon name, returns translated Pokemon description and other basic information
		JWT Authentication is required with it's defined algorithm, payload structure and encoding formula if token is enabled from configuration.

Known Bugs and Limitations

Ref#	Name	Type	Description
1	Cache Mechanism	Limitation	As this version doesn't release any POST/PUT API which will be applied to the cache mechanism and GET API will check information before going to check in the database.

Dependencies

Installation
